Usage

Desensitization items are used to make a horse resilient to 'scary' stimulus and improving the trust (connection) with their rider. In game, use of desensitization items increases a horse's [Affinity](#).

To use any of these items, right click a [SWEM Horse](#) while holding the item. Initially they will respond with Red (Angry) particles and could buck or rear, indicating they are frightened. As you continue to right click, eventually they will emit Gray (Meh) particles to show the item is tolerated - you will receive no Affinity.

You can only use **one** desensitization item each (Minecraft) day. The item can be used up to 7 times per day. After 3 days of consecutive use, horses will become accustomed to it and gains a bonus 150XP for affinity experience. On successfully becoming accustomed to an item, the horse will display purple *woot* particles. After this, they cannot receive any further affinity with that **specific** item.

A frightened and bucking horse can harm nearby entities. Nearby horses may kick out if harmed, and can initiate a fatal 'kick-off'. It is recommended you use desensitization items in a controlled area such as an arena or roundpen.
