

Measurement Tool

Description: A Measurement Tool is an item that can be used to create jumps.

Do not destroy jumps by hand or the jump controller will remain! **Always delete jumps via the Jump Builder GUI.**

Details:

Rarity color:	Common
Renewable:	Yes
Stackable:	Yes (64)
Durability:	None

Obtaining

Crafting

Measurement tools come in a single (gray/black) color.
A Measurement Tool can be crafted with 1 Iron Ingot, 2 Iron Nuggets and 1 Dried Kelp.

Usage

Error messages can be seen above the inventory hotbar when the Measurement Tool is used incorrectly.

Creating A Jump

Measurement tool is required to create custom jumps. Follow this step by step method to use the tool.

1. Place **any** block (ie dirt) on the ground
2. Move sideways (straight line) and place a second block exactly 5 blocks away (Block - 5B space - Block)
3. Stand in front of one block (looking at it) and right-click the block with a measurement tool in hand
4. Stand in front of the second block (looking at it) and right-click the block with a measurement tool in hand
5. This should bring up the Jump Builder GUI

Customizing Jumps

You need to interact with the Jump to customize it's features. The Jump Builder GUI (menu) is automatically opened when a new jump is made, and can be opened again at any time by right-clicking on a jump with a measurement tool.

Edit Obstacle	Type: Left click the None button next to Layer to cycle forward through obstacles, right click to go back.
	Color: Left click the color button next to an obstacle to cycle through colors, right click to go back.
	Some obstacle variants do not have a color option (logs etc)
Edit Levels	Add: Left click the ' Add Layer ' button in the top left of the GUI to add a new layer (One block higher)
	Delete: Left click the ' Delete Layer ' button in the top left of the GUI to delete a layer (One block lower)
Edit Standards	Type: Left click the button next to ' Standards ' to cycle between jump standards (posts that support poles)
Delete Jump	If you want to get rid of the entire jump, left click the 'Destroy' button in the top right of the GUI.
	Do not destroy jumps by hand or the invisible jump controls will remain!
Exit GUI	Press the escape key to exit out of the Jump GUI at any time.

Other information

- Even if a layer is set to None (no pole/plank) there will still be an invisible barrier that cannot be passed through
- Each jump has a small, invisible jump control element that is spawned when a new jump is created

- If the jump controller intersects a block it will be removed and no block can be placed there (6B up - top right of jump)
- If the jump controller is destroyed (usually only possible with commands) the jump can no longer be edited)
- If the jump is destroyed by hand instead of the GUI, it will be impossible to remove the controller without commands

Indoor arenas should have a minimum of 11B height clearance if intended to support max-level jumps. This height is the peak point at a max level jump where a rider and horse would comfortably avoid collision with the roof.

Options

View Options			
		Base Elements (Obstacles) - Can be used on Layer 1 Only	
	Log	A solid oak log block (slightly thinner than a normal block) ideal for XC jumps.	None

Pole On Box (Small)	A pole on a small X shaped box, ideal for training and cavaletti	16 Colors
Pole On Box (Large)	A pole on a slightly higher X shaped box, ideal for training and cavaletti	16 Colors
Brush Box	A small bushy plant in a whitewash planter, ideal for Show Jumping	None
Flower Box	A small planter of colorful flowers, ideal for Show Jumping	16 Colors
Coop	A small triangular fence obstacle, ideal for XC jumps or dressage borders	None
Roll Top	A quarter-circle curved obstacle, ideal for XC jumps	16 Colors
Wall Mini	A brick-wall slab	None
Ground Pole	A simple striped pole that sits directly on the ground, ideal for training and cavaletti	16 Colors
	Elements (Obstacles) - Can be used on any Layer (1-5)	
None	No visible obstacle for that layer (will still have an invisible obstacle)	N/A
Rail	A simple striped pole	16 Colors
Plank	A striped plank	16 Colors
Plank Fancy	A solid-color wavy plank	16 Colors
	Standards (Support Posts on the side of a jump)	
None	No standards - Jumps with poles or planks may appear to float without standards	N/A
Schooling	A simple upright post with a small base.	N/A
Radial	A wider based standard with a circular pattern (level 3+)	N/A
Vertical Slat	A wider based standard with a simple wooden slat design	N/A

Troubleshooting

I do not understand how to use the measurement tool!

Still stuck? Check out Brooke's [Video on YT!](#)

1. Face the direction of the brown arrows
2. Right click the blue circle side of the blocks with measurement tool

I keep getting an error message!

Error Messages (Incorrect Use)

Text above the inventory hotbar can inform a user that they are using the Measurement Tool incorrectly. There are 4 error messages in total that can appear for any of the most common user-errors when making jumps.

The gap is too wide or too narrow! Must be block, 5 spaces, then another block.

Solution: Check that there is exactly 5 blocks **between** marker blocks. B-S-S-S-S-B (B = Block, S = Space/Air) Too many spaces or too few and the jump will not be created.

You are not facing the same direction as the first position

Solution: Face your first marker block, right click the block. Move **sideways** (do not turn!) until you are in front of the second block, right click it.

The block gap must be left/right of the way you are facing, not forward/backward.

Solution: One of your blocks is not directly opposite the other marker, make sure they are on a straight line and not at an angle.

The jump base is on the ground! Make sure you make your jump on the same Y level!

Solution: One of your blocks is at a different height than the other marker, make sure both blocks are at same Y level (on level ground)

Known Issues

If you find an issue, please report it to our bugs channel on [Discord](#). We ask that you look to see if your issue was reported first!

- **[~]** Measurement Tools can stop working due to 'soft locking'. If the player is receiving no error messages for incorrect use, the issue can usually be resolved by replacing the item.

It is strongly recommended that jumps (and other multiblock items like stall doors) are deleted prior to taking a WorldEdit selection to avoid issues. Including jumps and stall doors in WE Schematics **can potentially corrupt schematics**.

Changelog

View Changes

This is not a complete list of version changes / fixes. It is a changelog of relevant wiki-related version information.

MC Version	Release	Notes
------------	---------	-------

1.18.2	1.18.2-1.0.0	Measurement Tool crafting recipe changed to remove Amethyst, and require less iron (3 > ~1.2)
1.16.5	1.16.5-0.5.3.21	[Deprecated Recipe]
