

# [1.18] VIP Server & Modpack

## Join The Server

In order to join the server you must have:

- A compatible modpack including **ALL** library and core mods
- The server IP - Available from **Server-Info** channel.
- Be whitelisted to join - Request in **Whitelisting Thread** under **Server-Info** channel.
- An active VIP membership

If you are unable to join the VIP server, please check you have the modlist shown below and you are using the correct IP.

You can ask for help in **VIP Server Help** if you cannot join after trying the above.

**CurseForge Manifest (Regular):** [DOWNLOAD HERE](#)

**CurseForge Manifest (Shaders):** [DOWNLOAD HERE](#)

How to install a CurseForge manifest is explained below - please scroll and read this before requesting help!

## Installing Mods

If you do not know how to use mods, please check out our **Installing Mods** page on the wiki!

## Using CurseForge Manifests

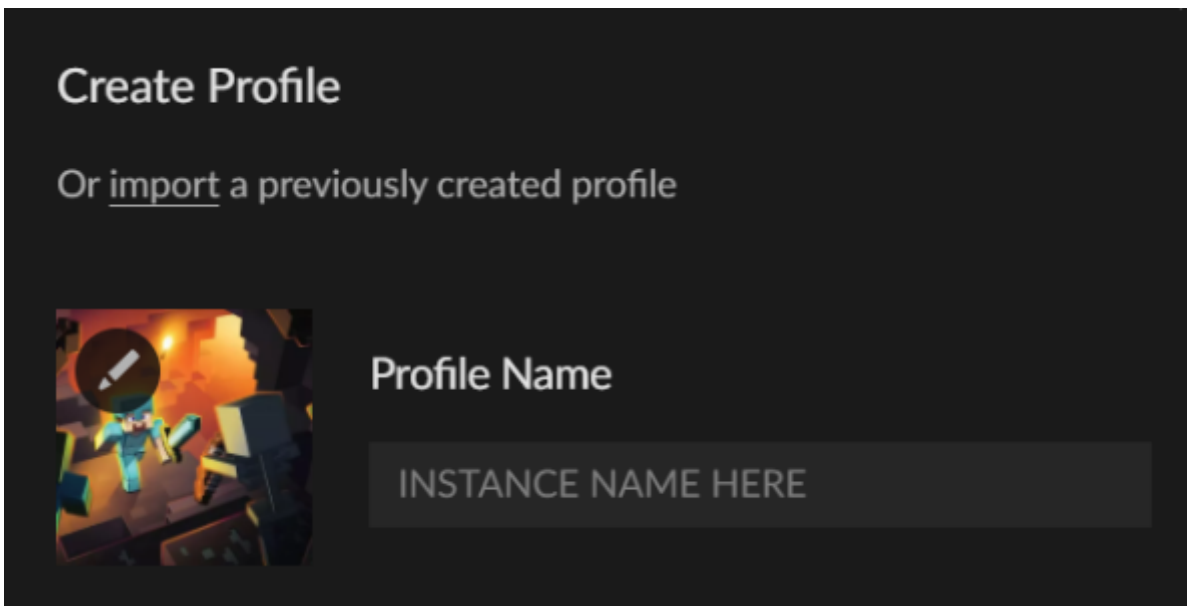

CurseForge no longer supports modpacks for other launchers - so you cannot just download a full ZIP of the mods required. This means servers either need to manually ZIP their mods (depriving themselves and other developers of downloads) or use a CurseForge manifest. Manifests are information that tell the CurseForge launcher which mods to download and which versions as well as configs etc so you can quickly import a profile and its settings to play with that modpack or join servers using their required modpacks. The downside of this is it means **only the CurseForge app can do this!**

**How To (CurseForge app)**

1. Download the Curseforge Manifest (Regular) **OR** the CurseForge Manifest (Shaders/Rubidium)
2. On the CurseForge App, select **Create Custom Profile** on the top bar to open a preferences menu.

3. Select the underlined section that says to **Import** a previously created profile
4. Select the downloaded file (Manifest)

### How To (Other Launchers)

Other launchers cannot use Manifests - your only options are:

- Download all mod versions manually using our modlist
- Download the mods on the Curseforge App and copy them from the modfolder into another launcher

In short, if you want an easy life and easy download, use CurseForge to download and play. If you're a firm supporter or another launcher, you will have to do a little extra preparation to initially download AND to maintain your modpack as **it will not automatically update if any server changes are made.**

We will **NOT** offer a ZIP or MultiMC (or other launcher) export out of respect for other developers and their downloads.
